To whom it may concern:

This report documents the results of the testing on the Polylok Roof Vent, Part NO.- PCF-PLVF November 16, 2010. The test specimen was filled with 1 lbs. of activated charcoal in the 4 mm. pellet form. The testing was conducted at NFM, Wallingford, CT and was witnessed and verified by Shane Thomas.

The testing done, was a maximum air flow test procedure. The testing was done in strict accordance with the Frasier test procedure for air flow. Below are the results of testing.

Maximum air flow - 269 Cubic Feet Per Minute

Sincerely,

A handwritten signature in black ink, appearing to read 'Shane Thomas', written over a white background.
